

TOPIC: DOM. HTTP Client. Fetch

Task 1:

Create a web page to get information about a GitHub user account by username.

User should enter an account login and the application displays the following data:

- profile photo
- name, login
- account URL, blog URL
- city, country
- email, followers, followings etc.

You can use the GitHub API: <https://api.github.com/users/{username}>

Search login

Url to github: <https://github.com/mojombo>

Blog: <http://tom.preston-werner.com>

City: San Francisco

Email: No Email

Followers: 21820 Following 11

Name: Tom Preston-Werner

Login: mojombo
